**SHORELINE TYPES:**

- |                                      |                                   |
|--------------------------------------|-----------------------------------|
| 1. Exposed Rocky Shores              | 7. Riprap                         |
| 2. Exposed Wave-Cut Platform         | 8. Exposed Tidal Flat             |
| 3. Fine-to-Medium-Grained Sand Beach | 9. Sheltered Rocky Shore          |
| 4. Coarse-Grained Sand Beach         | 10. Sheltered Rocky Rubble Slopes |
| 5. Mixed Sand and Gravel Beach       | 11. Sheltered Tidal Flat          |
| 6. Gravel Beach                      | 12. Salt-Marsh                    |

SURROUNDING USE: Nat = Natural, Ag = Agricultural, Com = Commercial, Res = Residential, Rec = Recreation

**Form 2: Impact Assessment Matrix**

			RECOVERY TIME			
			SLOW ←————→ RAPID			
			>10 yrs	5 – 10 yrs	2 – 5 yrs	< 1 yr
			1	2	3	4
Potential Impact	Severe (>50%)	A	1A	2A	3A	4A
	Major (30-50%)	B	1B	2B	3B	4B
	Minor (10-30%)	C	1C	2C	3C	4C
	Slight (<10%)	D	1D	2D	3D	4D

 HIGH CONCERN	 MODERATE CONCERN	 LOW CONCERN
--	--	---

**Form 3: Response Benefit Assessment Form**

Site:								
RESPONSE OPTIONS	<i>Natural Recovery</i>							
<b>ECOLOGICAL</b>								
Corals								
Mangroves								
Salt-marsh								
Seagrass

**ANNEX 2**

**EXAMPLE OF ENVIRONMENTAL RISK AND RESPONSE BENEFIT ASSESSMENT**

1 A spill of heavy fuel oil is predicted to impact on an area of coastline (Figure 1) approximately 5 kilometres long (anywhere from Rocky Point to the Fable Town Industrial Zone). The oil is not suitable for chemical dispersion and sea conditions are currently preventing the booming and collection of the oil from the sea surface. Approximately 500 metres of boom are available for deployment, prior to the oil reaching the shoreline. Based on environmental risk, which area should be prioritized for protection?

**Figure 1: Sketch map of fable town spill impact zone.**

**Step 1 – Site identification**

2 The potential impact area includes a range of shoreline and habitat types, and these have been used as the basis for identifying sites.

Resources Present	Site /Environmental Compartment							
SITE NAME	<i>Rocky Point</i>	<i>Bird Island</i>	<i>Shelly Beach</i>	<i>Salty Lagoon</i>	<i>South Head</i>	<i>Fable Town</i>		
MAIN SHORELINE TYPE	<i>1</i>	<i>1</i>	<i>3</i>	<i>11/12</i>	<i>7</i>	<i>7</i>		
SURROUNDING USE	<i>Ag</i>	<i>Nat</i>	<i>Nat</i>	<i>Ag</i>	<i>Res</i>	<i>Com</i>		
ECOLOGICAL								
Corals								
Mangroves								
Salt-marsh								
Seagrass								
Seaweed								
Shellfish								

**Step 2 – Resource identification**

3 Using the list on the left hand side of the form as a guide, a tick has been placed against those resources that are significant at each of the sites.

Resources Present	Site /Environmental Compartment						
	<i>Rocky Point</i>	<i>Bird Island</i>	<i>Shelly Beach</i>	<i>Salty Lagoon</i>	<i>South Head</i>	<i>industrial zone</i>	
SITE NAME							
MAIN SHORELINE TYPE	<i>1</i>	<i>1</i>	<i>3</i>	<i>11/12</i>	<i>7</i>	<i>7</i>	
SURROUNDING USE	<i>Ag</i>	<i>Nat</i>	<i>Nat</i>	<i>Ag</i>	<i>Res</i>	<i>Com</i>	
ECOLOGICAL							
Corals							
Mangroves				✓			
Salt-marsh							
Seagrass				✓			
Seaweed	✓	✓					
Shellfish	✓	✓	✓	✓			
Fish spawning							
Spawning - other							
Shore birds			✓	✓			
Birds on Water				✓	✓	✓	
Swimming/diving birds	✓	✓			✓	✓	
Seals/Sea lions	✓	✓	✓				
Whales/dolphins							
Other - <i>Crayfish</i>	✓	✓					
SOCIAL/CULTURAL							
Food gathering/fishing				✓	✓		
Cultural significance		✓					
Archaeological site							
High aesthetic value							
Protected area*		✓					
Recreational value			✓				
Other							
ECONOMIC							
Aquaculture					✓		
Marina						✓	
Fishery - Fish							
Fishery- Other (eg. Lobster)							
Infrastructure - <i>Wharf</i>						✓	
Other							

**Step 3 – Assess level of concern**

4 Using the Impact Assessment Matrix, the level of concern has been completed for each of the sites and resources. The site posing the greatest level of environmental concern can now be clearly identified.

Resources Present	Site /Environmental Compartment						
	<i>Rocky Point</i>	<i>Bird Island</i>	<i>Shelly Beach</i>	<i>Salty Lagoon</i>	<i>South Head</i>	<i>industrial zone</i>	
SITE NAME							
MAIN SHORELINE TYPE	<i>1</i>	<i>1</i>	<i>3</i>	<i>11/12</i>	<i>7</i>	<i>7</i>	
SURROUNDING USE	<i>Ag</i>	<i>Nat</i>	<i>Nat</i>	<i>Ag</i>	<i>Res</i>	<i>Com</i>	
ECOLOGICAL							
Mangroves				<i>1C</i>			
Seagrass				<i>2C</i>			
Seaweed	<i>4D</i>	<i>4D</i>					
Shellfish	<i>4B</i>	<i>4B</i>	<i>4B</i>	<i>3B</i>			
Shore birds			<i>2C</i>	<i>2B</i>			
Birds on Water				<i>2B</i>	<i>3C</i>	<i>4D</i>	
Swimming/diving birds	<i>3C</i>	<i>3C</i>			<i>4C</i>	<i>4C</i>	
Seals/Sea lions	<i>3D</i>	<i>3D</i>	<i>3D</i>				
Other - <i>Crayfish</i>	<i>2D</i>	<i>2D</i>					
SOCIAL/CULTURAL							
Food gathering/fishing				<i>3C</i>	<i>3C</i>		
Cultural significance		<i>4C</i>					
Protected area*		<i>4D</i>					
Recreational value			<i>4A</i>				
ECONOMIC							
Aquaculture					<i>4B</i>		
Marina						<i>4A</i>	
Infrastructure - <i>Wharf</i>						<i>4C</i>	

5 From the outcome of this assessment the environmental risk would suggest putting the booming resources into preventing oil from entering Salty Lagoon.

**Step 4 – Response benefit assessment**

6 For each site (Salty Lagoon is shown for the purposes of this example, the booming attempt having unfortunately been unsuccessful), assess the potential impact and likely recovery time for each of the response options being considered to allow the relative impacts of each option to be compared. In this case it can be seen that the option offering the greatest environmental benefit for Salty Lagoon is low-pressure flushing, followed by manual removal of the oil by hand.

**Form 3: Response Benefit Assessment Form**

SALTY LAGOON							
RESPONSE OPTIONS	Natural Recovery	Mechanical Removal (machinery)	Manual Removal (hand cleaning)	Low-Pressure Flushing	High-Pressure Water Cleaning	Chemical Shore Cleaners	
<b>ECOLOGICAL</b>							
Mangroves	1C	1A	2D	3D	1B	1D	
Seagrass - <i>Intertidal</i>	2C	2A	3D	3D	2B	2B	
Seaweed							
Shellfish - <i>Intertidal</i>	3B	3A	4C	4C	2B	3A	
Shore birds	2B	4D	4D	4D	4D	3D	
Birds on Water	2B	4D	4D	4D	4D	4D	
Swimming/diving birds							
Seals/Sea lions							
Other - <i>Crayfish</i>							
<b>SOCIAL/CULTURAL</b>							
Food gathering/fishing	3C	4B	4B	4B	2B	4B	
Cultural significance							
Protected area*							
Recreational value							
<b>ECONOMIC</b>							
Aquaculture							
Marina							
Infrastructure - <i>Wharf</i>							

**Notes:**

1. All shoreline flushing techniques assume immediate collection of waste oil from the water.
2. Potential for remobilisation of oil, penetration of oil into sediments, mechanical impacts from the response activities and reduced exposure time have been taken into account when assessing each response option.
