

SINTEF

Possible impact of MASS on IMO's facilitation activities

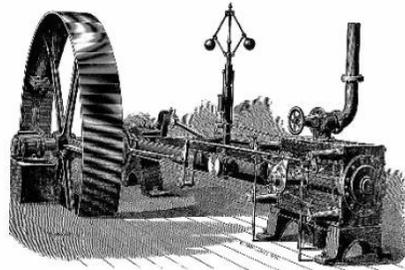

Ørnulf Jan Rødseth, Senior Scientist, SINTEF Ocean / ISO Observer

Sept. 5th 2022 – IMO seminar on MASS

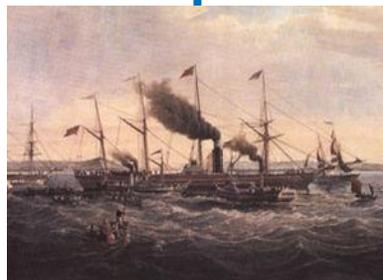

SINTEF

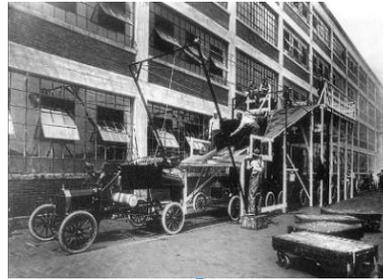

The fourth shipping revolution is on

1800

1. Mechanized Power

1900

2. Mass Production

1970

3. Computerized Control

2010

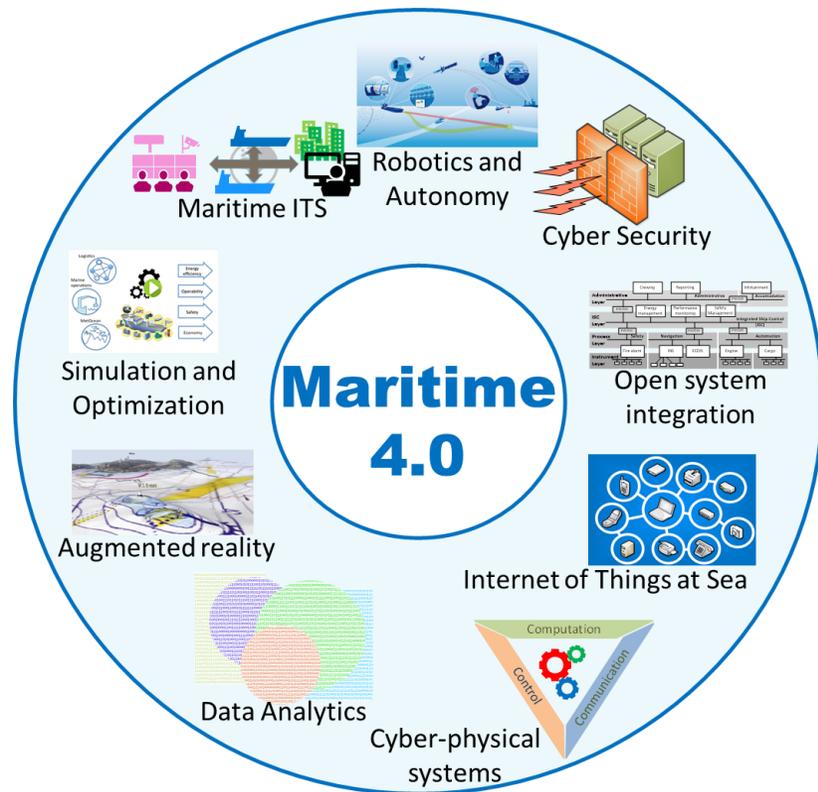

4. Maritime 4.0

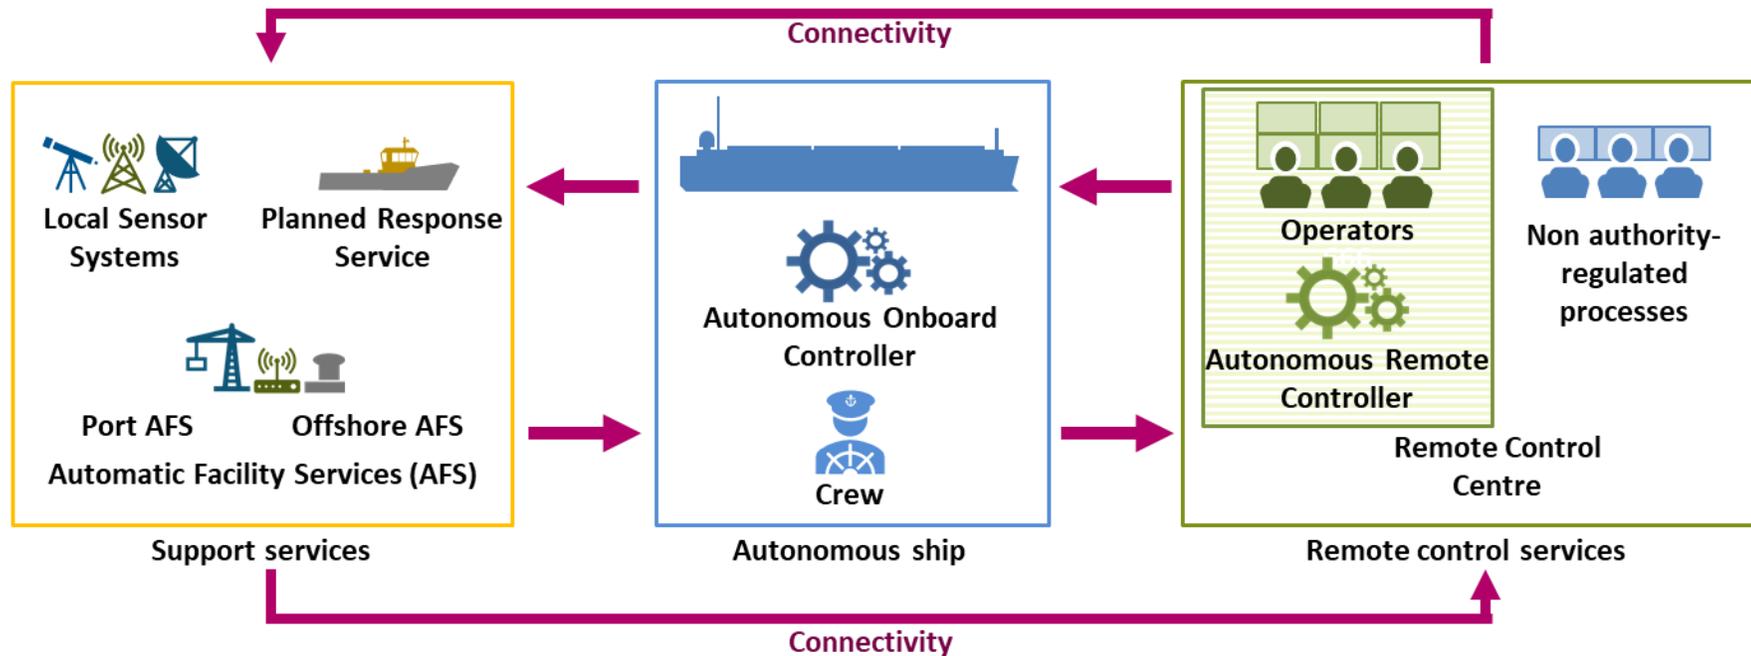

SINTEF

The essence is digitalization and automation

and MASS is part of it

MASS: Maritime autonomous ship **system**

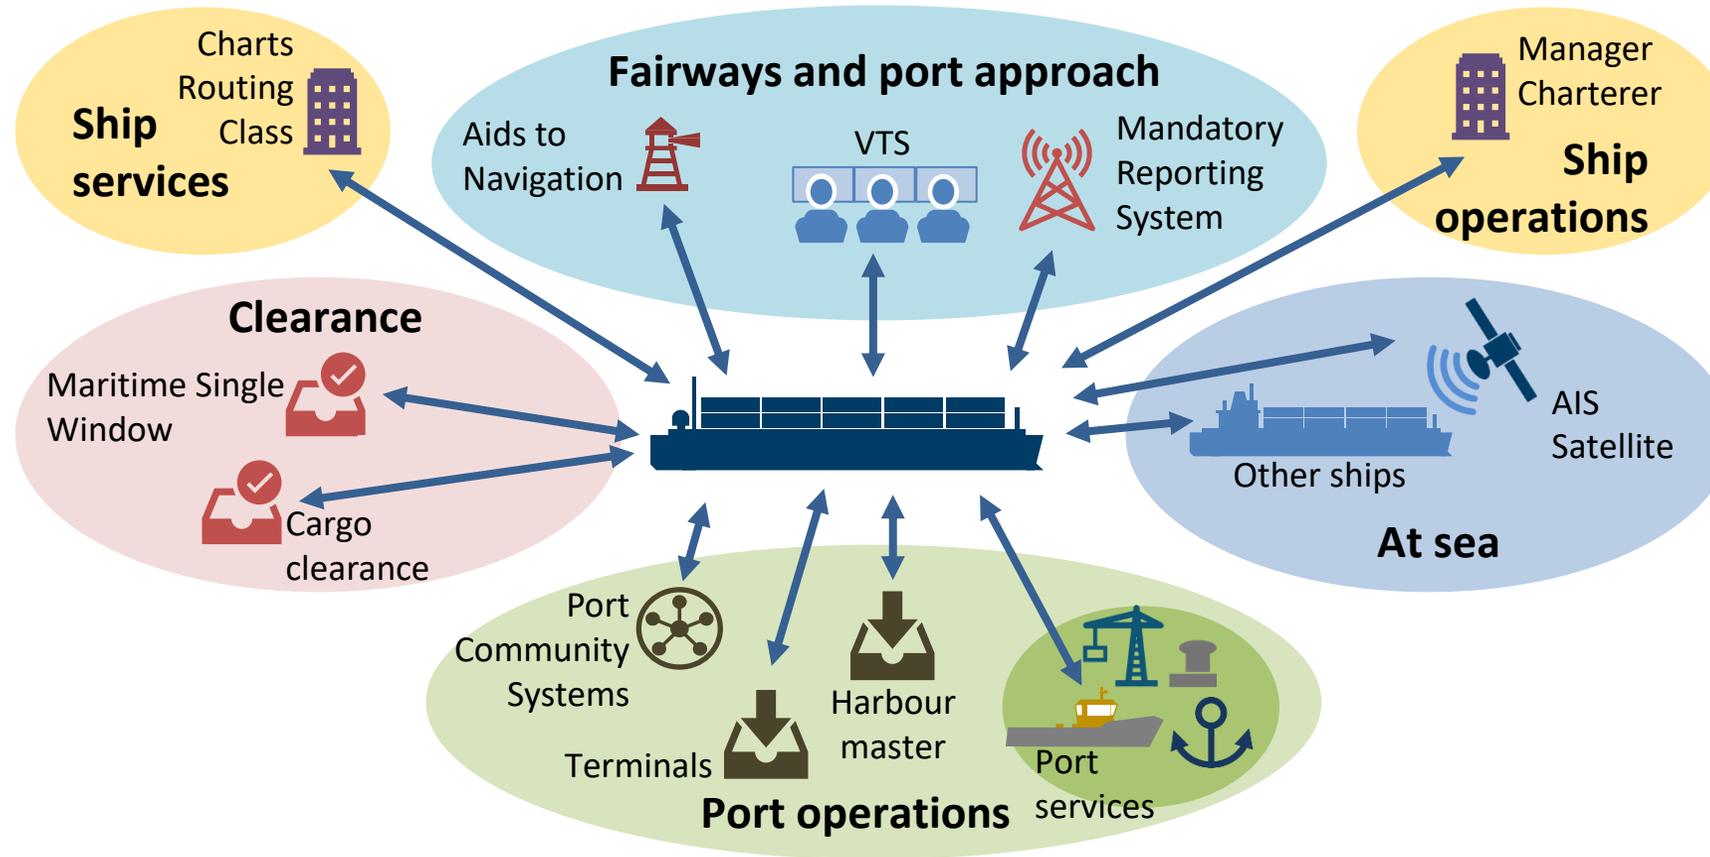

The Autonomous Ship System:

- The ship
- The automation
- The humans
- The support systems
- The connectivity

SINTEF

MASS requires automated communication

SINTEF

Some covered by (several) industry standards

Onboard networks	IEC 61162, ISO 16425, ISO 19847/48
Automatic data transfer	IEC 63173-2, ISO 28005-1, ISO 19848
Automated port	ISO 28005, IALA S-211
Cyber security	ISO 23806, IEC 63154
MSW, reporting	ISO 28005, UN/EDIFACT, IALA G1159
Just in Time arrival	IALA S-211, DCSA, ISO 28005-3

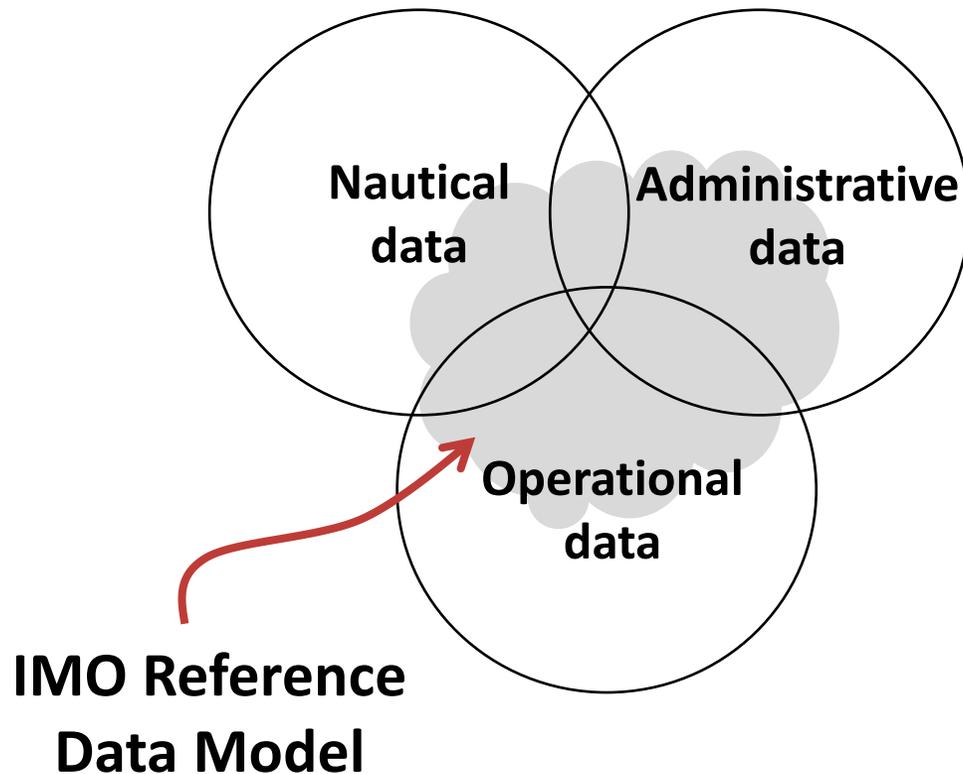

Just a few examples, many more!

SINTEF

A new focal point: The IMO Compendium/Reference Data Model

Key sources of data

- The FAL Forms
- Maritime Declaration of Health
- Stowaways
- Waste reporting
- Just in Time arrival
- Ship Certificate list
- Mandatory Ship Reporting System
- Ballast water reporting
- ...

Initial contributors

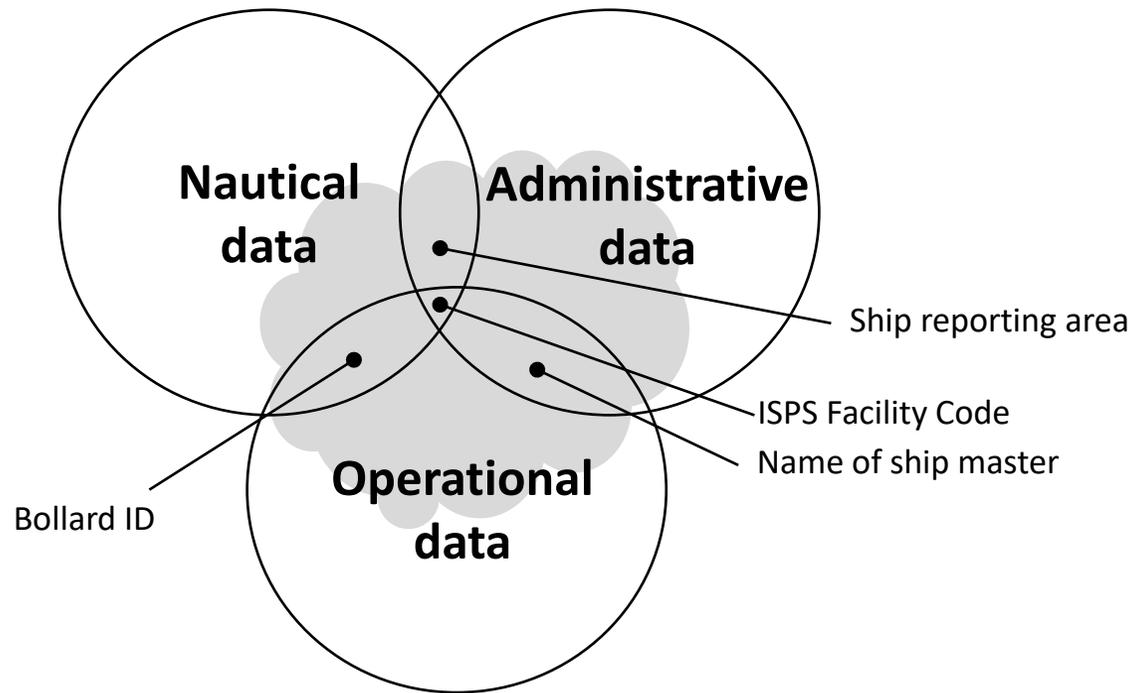

IMO

UNITED NATIONS
ECONOMIC COMMISSION
FOR EUROPE

Harmonizes data elements between domains

Agreed on common definitions

Growing number of contributors

International Standards

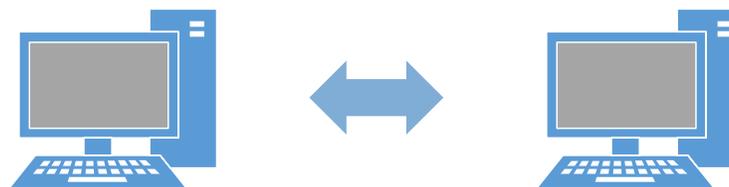

SINTEF

Digital trust and cyber security

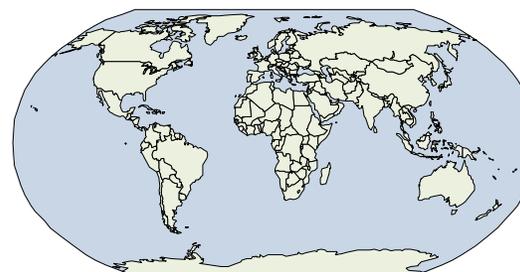

Digitalization in the transport systems

Automatic machine to machine communication

Autonomous and automatic transport

To or from ships, world wide

Connected and automated transport

Secure and trusted data transmissions

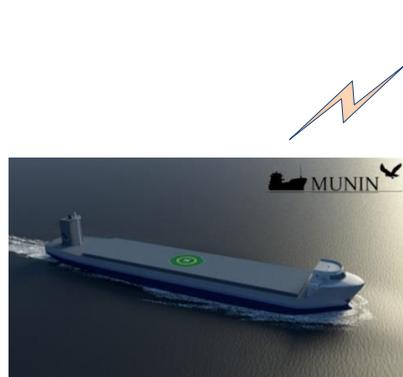

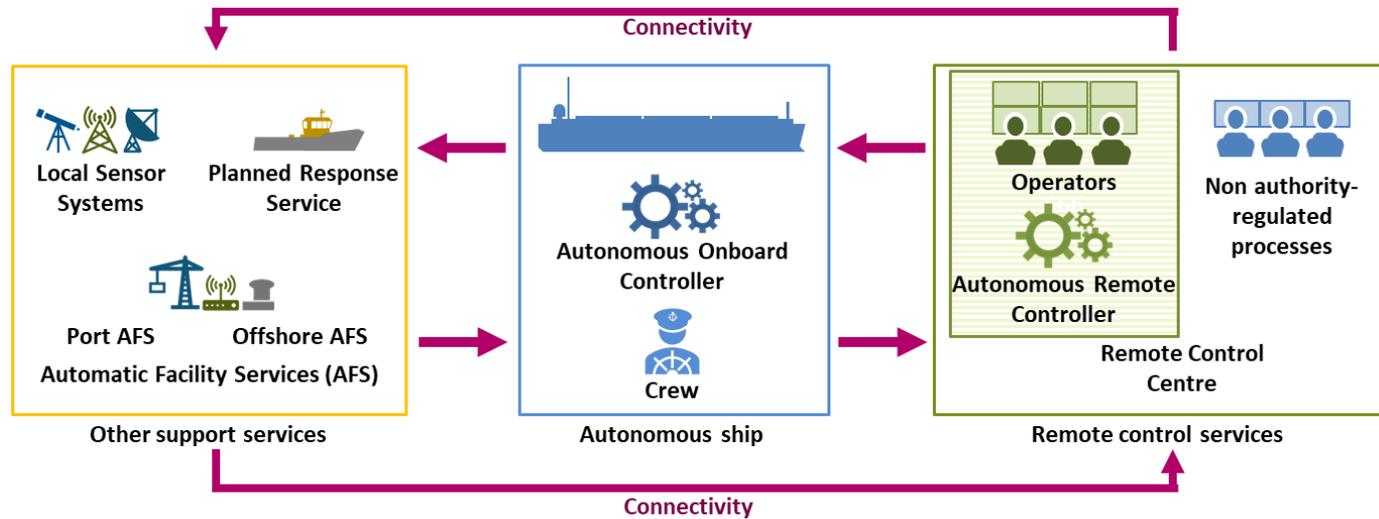

SINTEF

**Strong international competition,
but also a strong need to cooperate!**

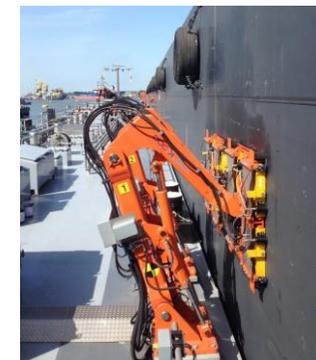

SINTEF

Autonomous Ship System: Many interfaces

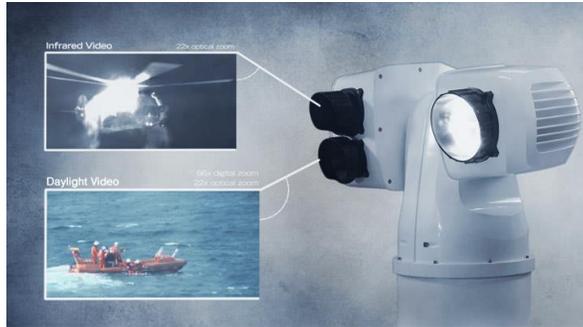

Communication ship to remote control

Interfaces to shore automation systems

Development of MASS is expensive today!

No standard system integration

No standard interface to RCC

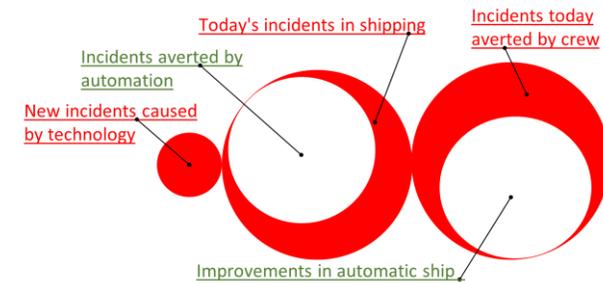

No standard port infrastructure

No standard rules or legislation

No standard for training of crew

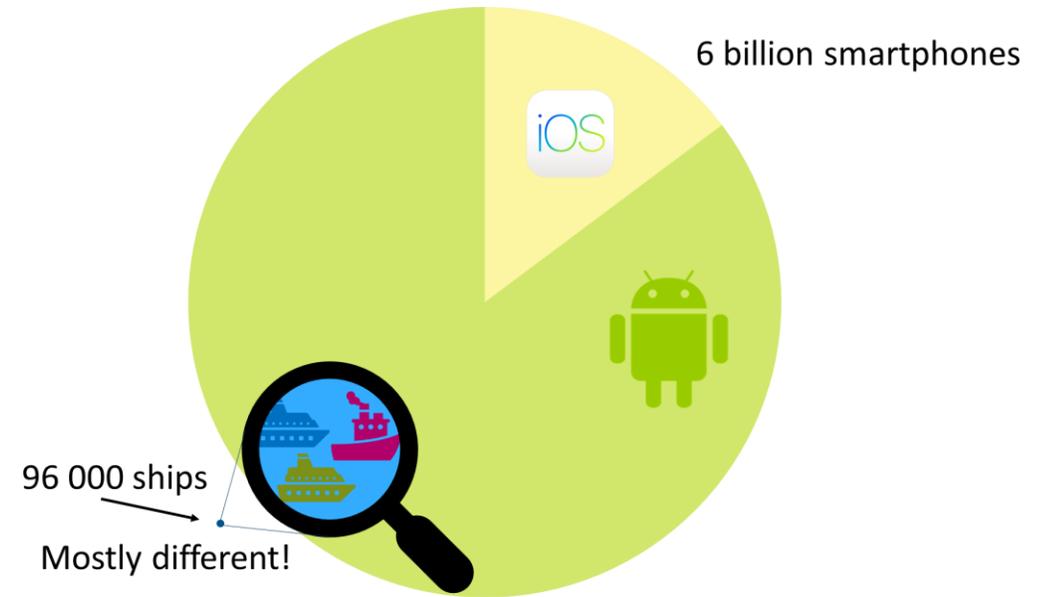

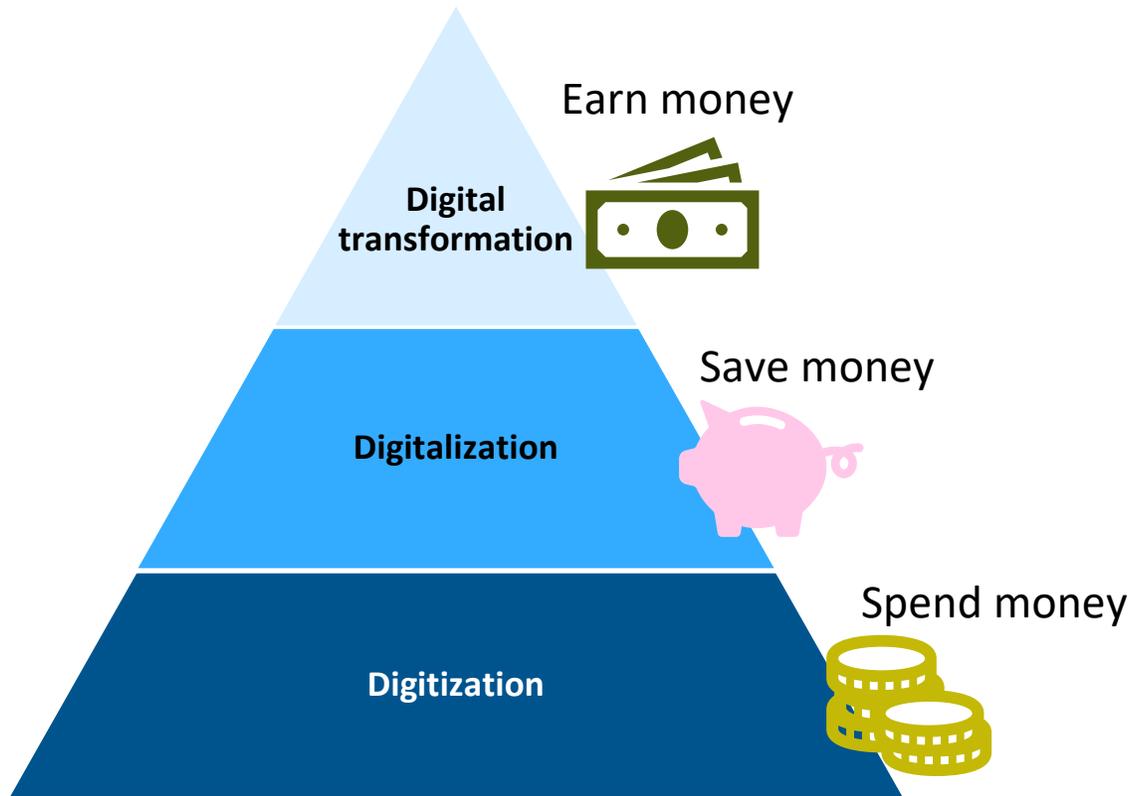

No standard risk model

SINTEF

Standards reduce costs and increase innovation

SINTEF

Conclusions

- Automation and digitalization will affect all ships
- This is a system, including the ship itself, port, RCC and many other parties
- Shipping is a small sector and require more cooperation in standards development
- The FAL Compendium and reference data model provide a new focal point

SINTEF

Thank you for your attention!
